Executive Summary

I'm a software engineer who believes that technology should be a bridge, not a barrier. Whether I'm working in C and Java, my goal is always to create software that optimizes efficiency and solves actual business headaches. I'm currently focused on how emerging AI can be integrated into core systems to make them smarter and more intuitive. I'm looking to bring this mindset to TCS, contributing to the end-to-end engineering of solutions that make a tangible difference for clients worldwide.

Technical Skills

- Programming skills (C, Java, Python, HTML)
- Tool & software (Git, Visual Studio Code, Antigravity)

Soft Skills.

- Communication and Team work
- Problem Solving
- Time management

- Multilingual Ability (Tamil, English)

Professional Experience

- Dynamic and detail-oriented professional with a strong foundation in collaborative problem-solving and technical communication
- I have completed my internship at Plasmid Company in the AI domain in online mode. I developed a project for spam news detection using AI tools
- **Project: AI-Integrated Safety Monitoring System**
 1. Developed a smart safety sensor using AI to identify risks and prevent accidents.
 2. Engineered with a real-time data processing system to provide immediate safety alerts.

Responsibility as Team member:

- **Developed** the core AI model to distinguish between "safe" and "dangerous" environmental conditions.
- **Integrated** hardware sensors with software to ensure real-time data collection.

The Impact:

- **Enhanced Safety:** Reduced hazard response time from minutes to milliseconds.
- **Reliability:** Achieved high accuracy in detection, minimizing "false alarms."
- **Project: Personal Finance & Expense Tracker**
 1. Designed a user-friendly application to help students monitor and categorise expenditures.
 2. Utilized data visualization to help users understand their financial patterns at a glance.

Responsibility as Team Leader:

- **Built** the user interface to make adding expenses quick and easy for busy students.

- **Programmed** the backend logic to calculate totals, averages, and remaining balances.

The Impact:

- **Financial Awareness:** Helped users identify "hidden" costs (like too many subscriptions or snacks).
- **Budget Control:** Reduced overspending by providing a clear "stop sign" when limits were hit.
- **Efficiency:** Saved users time by automating calculations that they previously did by hand.

Education

BACHELOR OF TECHNOLOGY (B Tech)
Sri Sairam Institute of Technology

2023

11th & 12th (State Board)
Don Bosco School ,

2021

Award & Accomplishment

Ranked 71st out of 500+ Participants | B2G AI Hackathon
Sri Sairam Engineering College

- Secured a top 15% finish in a high-intensity national-level hackathon by developing an [AI-powered Safety Sensor].
- Evaluated on innovation, technical execution, and real-world problem-solving.
